

# Forensic DNA methylation profiling for investigative leads

Hwan Young Lee

Department of Forensic Medicine

Yonsei University College of Medicine, Seoul, Korea

## Epigenetic Variation

- Epigenetic profiles are specific to **tissue, age, and environmental factors**

## DNA Methylation in Forensics

- Body fluid identification, prediction of age and smoking habits, etc.

## Analysis of a Casework Sample

- A stain preliminary positive for semen and saliva
- Two men's mixed STR profile

## A Casework Sample: Mixture Analysis

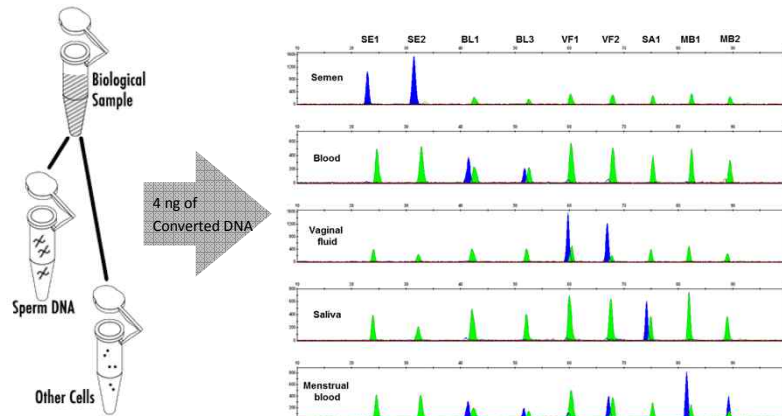

### Differential extraction

## A Casework Sample: Mixture Analysis

### Differential extraction

### DNA methylation-based body fluid typing

Lee HY et al., Forensic Sci Int Genet (2016)

## DNA Methylation-Based Body Fluid ID

---

## Forensic DNA Phenotyping

---

- Forensic DNA phenotyping is expected to be criminally useful in helping **to reduce the number of potential suspects**.

Picture from [snapshot.parabon-nanolabs.com](https://snapshot.parabon-nanolabs.com)

## Aging and Forensic DNA Phenotyping

- Age as EVC (externally visible characteristics) is expected to provide investigative lead to track unknown suspect or to identify missing persons regardless of ethnicity

Horvath. Genome Biol (2013)

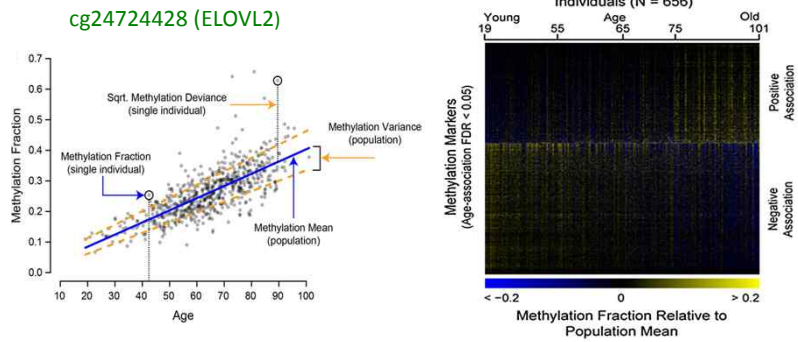

## DNA methylation-based age prediction

- Age-predictive models based on the use of blood or even across a broad spectrum of tissues have been reported

	Age signatures	Tissue	Error (years)
Bocklandt et al. (2011)	EDARADD, TOM1L1, NPTX2	Saliva	5.2
Garagnani et al. (2012)	ELOVL2, FHL2, PENK	Blood	-
Weidner et al. (2014)	ITGA2B, ASPA, PDE4C	Blood	4.3
Zbiec-Piekarska et al. (2015)	ELOVL2, C1orf132, TRIM59, KLF14, FHL2	Blood	3.9
Huang et al. (2015)	ASPA, ITGA2B, NPTX2	Blood	7.9
Lee et al. (2015)	TTC7b, NOX4, cg12837463	Semen	5.2
Hannum et al. (2013)	71 CpGs from HumanMethylation450 array	Blood	3.9
Horvath (2013)	353 CpGs from HumanMethylation27 array	Somatic tissues	3.6

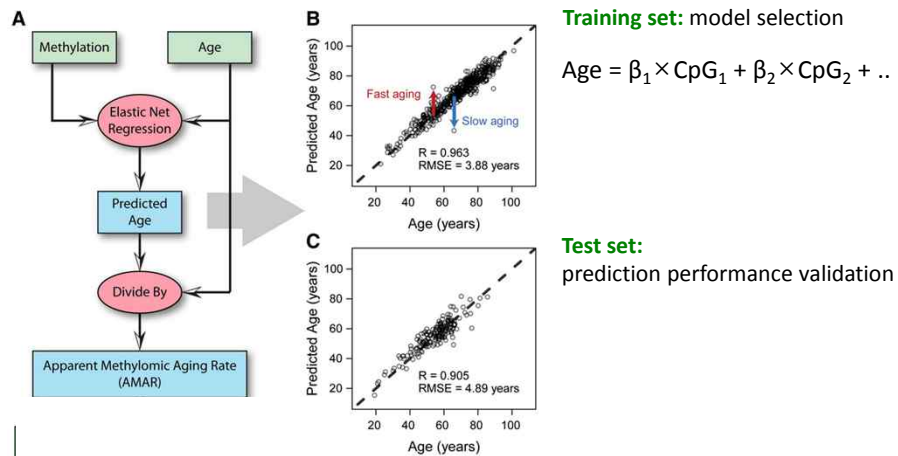

## Age-related DNA Methylation Changes

- There are markers which have significant association between methylation fraction and age

Hannum et al. Mol Cell (2013)

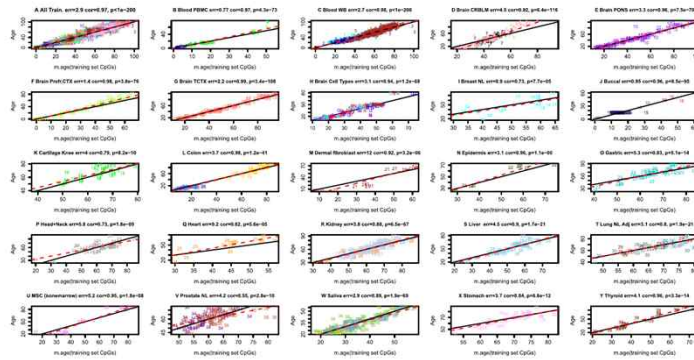

## Age Predictive Model Construction

Hannum et al. Mol Cell (2013)

# Age Predictive Model by Horvath

- An age predictor using 353 CpGs could be applied across a broad spectrum of somatic tissues

Horvath, Genome Biol (2013)

# Age Prediction in Blood

- 5 CpGs in the genes **ELOVL2**, **C1orf132**, **TRIM59**, **KLF14** and **FHL2**

$$\text{Age} = a + b \times \text{CpG}_1 + c \times \text{CpG}_2 + d \times \text{CpG}_3 + \dots$$

## Pyrosequencing

MAD (Mean Absolute Deviation) from chronological age = **3.9 years**

Zbicz-Piekarska et al. Forensic Sci Int Genet (2015)

## Age Prediction in Semen

- Age correlation of the 3 CpGs and predicted versus chronological ages of 125 semen samples in methylation SNaPshot analysis

Target ID	Estimate (n = 125)	P-value	R-squared	RMSE	MAD	Gene symbol
(Intercept)	46.240	0				
cg06304190	-0.519	0	0.766	6.690	5.2	TTC7B
cg12837463	-0.178	0.007				
cg06979108	0.541	0				NOX4

Lee et al. Forensic Sci Int Genet (2015)

## Previously Reported Saliva Markers

- Bocklandt et al. (2011), EDARADD, TOM1L1 and NPTX2 from 27K array
- Age vs. methylation from 450K array data of 54 Korean saliva samples

# Identification of Saliva Markers

Saliva samples obtained from 54 males aged 18 to 73 years

Analysis	Statistical method	No. CpGs	Cut-off	No. CpGs
Methylated level (avg.beta) ~ Age	<b>Linear regression</b>	445,791	FDR_P < 0.05	74,807
			FDR_P < 0.05 & R-squared > 0.65	80
			FDR_P < 0.05 & R-squared > 0.65 & diff >= 0.1	62

(1) 80 CpGs with FDR\_P < 0.05 & R-squared > 0.65

(2) 62 CpGs with FDR\_P < 0.05 & R-squared > 0.65 & methylation diff >= 0.1

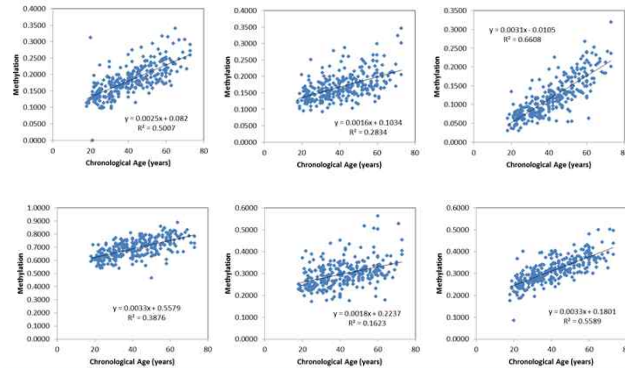

# Age-Associated Saliva Markers

**Methylation SNaPshot**

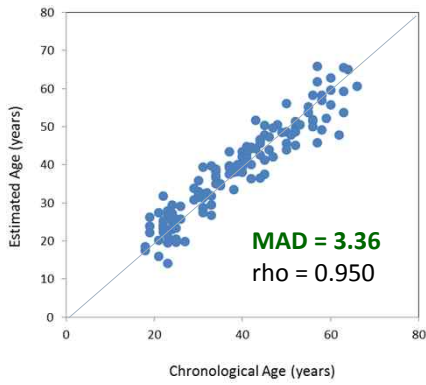

$$\%methyl = \frac{G \text{ intensity}}{(G+A) \text{ intensity}}$$

# Age Predictive Model for Saliva

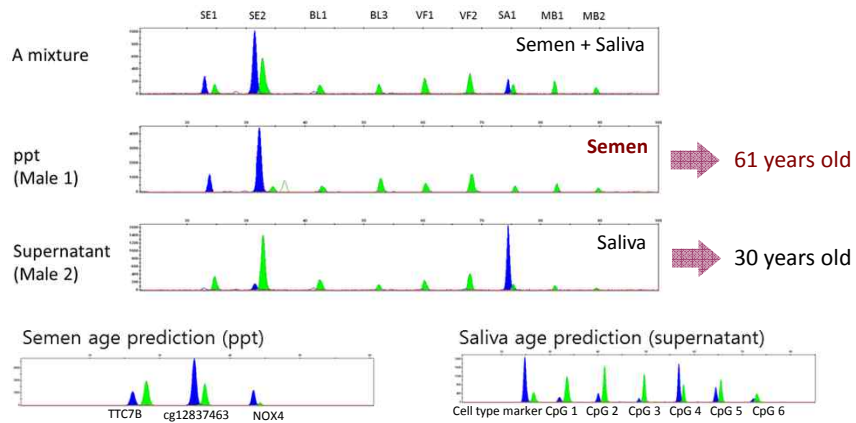

**Training set (n=128):**  
Model selection

**Test set (n=126):**  
Prediction performance validation

# Casework Samples

## DNA Methylation Profiling in Forensics

---

- Just like epigenetics to genetics, DNA methylation analyses are expected to add more informative layers to the forensic genetic analyses of the evidence materials

## Acknowledgment
